

NAME

afe -- ADMtek Fast Ethernet device driver

SYNOPSIS

/dev/afe

DESCRIPTION

The **afe** driver provides support for the Centaur and Comet families of Fast Ethernet PCI controllers originally produced by ADMtek and Infineon.

These devices generally support the standard Fast Ethernet features, including 10BASE-T and 100BASE-TX, both full and half duplex operation, IEEE 802.3 autonegotiation, etc. They also support full size MTUs (1500 bytes), even when used with VLANs. Most of them also support flow control.

The device driver supports the ieee802.3(5) properties, which can be configured with dladm(1M).

FILES

/dev/afe Special character device.
