19 .Nd wait for thread termination
20 .Sh SYNOPSIS
21 .In threads.h
22 .Ft int
23 .Fo thrd_join
24 .Fa "thrd_t thrd"
25 .Fa "int *res"
26 .Fc
27 .Sh DESCRIPTION
28 The
29 .Fn thrd_join
30 function suspends the execution of the current thread and waits for the
30 function suspends the execution of the current thread and waits for the
31 thread indicated by
32 .Fa thrd
33 to terminate and stores the exit status, as set by a call to
34 .Xr thrd_exit 3C ,
35 for that thread in
36 .Fa res ,
37 if
38 .Fa res
39 is non-null.
40 The
41 .Fa thrd
42 argument must be a member of the current process and it cannot be
43 detached.
44 If
45 .Fa thrd
46 has already terminated and another caller has not called
47 .Fn thrd_join
48 then the exit status will be returned to the caller without blocking
49 execution of the thread.
50 .Pp
51 If multiple threads call
52 .Fn thrd_join
53 on the same thread, then both will be suspended until that thread
54 terminates; however, only one thread will return successfully and obtain
55 the actual status and the other will instead return with an error.
56 .Pp
57 For additional information on the thread joining interfaces supported by
58 the system, see
59 .Xr pthread_join 3C
```

```
60 and
61 .Xr thrd_join 3C .
62 .Sh RETURN VALUES
62 .Sh RETURN_VALUES
63 Upon successful completion, the
64 .Fn thrd_join
65 function returns
66 .Sy thrd_success
67 and if
68 .Fa res
69 is a non-null pointer, it will be filled in with the exit status of
70 .Fa thrd .
71 If an error occurs,
72 .Sy thrd_error
73 will be returned.

24 \fBCK_OBJECT_HANDLE_PTR\fR \fIobj\fR);
25 .fi
27 .SH DESCRIPTION
29 .LP
28 These functions implement the RSA PKCS#11 v2.20 specification by using plug-ins
29 to provide the slots.
30 .sp
31 .LP
32 The \fBSUNW_C_GetMechSession()\fR function initializes the PKCS#11
33 cryptographic framework and performs all necessary calls to Standard PKCS#11
34 functions (see \fBlibpkcs11\fR(3LIB)) to create a session capable of providing
35 operations on the requested mechanism. It is not necessary to call
36 \fBC_Initialize()\fR or \fBC_GetSlotList()\fR before the first call to
38 \fBC_Initialize()\fR or \fBC_GetSlotList()\fR before the first call to
37 \fBSUNW_C_GetMechSession()\fR.
38 .sp
39 .LP
40 If the \fBSUNW_C_GetMechSession()\fR function is called multiple times, it will
41 return a new session each time without re-initializing the framework. If it is
43 return a new session each time without re-initializing the framework. If it is
42 unable to return a new session, \fBCKR_SESSION_COUNT\fR is returned.
43 .sp
44 .LP
45 The \fBC_CloseSession()\fR function should be called to release the session
46 when it is no longer required.
47 .sp
48 .LP
49 The \fBSUNW_C_KeyToObject()\fR function creates a key object for the specified
50 mechanism from the \fIrawkey\fR data. The object should be destroyed with
51 \fBC_DestroyObject()\fR when it is no longer required.
52 .SH RETURN VALUES
53 The \fBSUNW_C_GetMechSession()\fR function returns the following values:
54 .sp

10 .Dt LIBPKCS11 3LIB
10 .Os
11 .Sh NAME
12 .Nm libpkcs11
13 .Nd PKCS#11 Cryptographic Framework library
14 .Sh SYNOPSIS
15 .Lb libpkcs11
16 .In security/cryptoki.h
17 .In security/pkcs11.h
18 .Sh DESCRIPTION
19 The
20 .Nm
21 library implements the RSA Security Inc. PKCS#11
22 Cryptographic Token Interface (Cryptoki), v2.40 specification by using plug-ins
23 to provide the slots.
24 .Lp
25 Each plug-in, which also implements RSA PKCS#11 v2.40, represents one or more
26 slots.
27 .Lp
28 The
29 .Nm
30 library provides a special slot called the meta slot.
31 The meta slot provides a virtual union of capabilities of all other slots.
32 When available, the meta slot is always the first slot provided by
33 .Nm .
34 .Lp
35 The meta slot feature can be configured either system-wide or by individual
36 users.
37 System-wide configuration for meta slot features is done with the
38 .Xr cryptoadm 1M
39 utility.
40 User configuration for meta slot features is performed with environment
41 variables.
42 .Lp
43 By default, the following is the system-wide configuration for meta slot.
44 Meta slot is enabled.
45 Meta slot provides token-based object support with the Software RSA PKCS#11
46 softtoken
47 .Pq Xr pkcs11_softtoken 5 .
48 Meta slot is
49 allowed to move sensitive token objects to other slots if that is necessary to
50 perform an operation.
51 .Lp
52 Users can overwrite one or more system-wide configuration options for meta slot
53 using these environment variables.
54 .Lp
55 The
56 .Ev ${METASLOT_OBJECTSTORE_SLOT}
57 and
58 .Ev ${METASLOT_OBJECTSTORE_TOKEN}
59 environment variables are used to specify an alternate token object store.
60 A user can specify either slot-description in
```

new/usr/src/man/man3lib/libpkcs11.3lib

2

```
61 .Ev ${METASLOT_OBJECTSTORE_SLOT}
62 or token-label in
63 .Ev ${METASLOT_OBJECTSTORE_TOKEN} ,
64 or both.
65 .Ev ${METASLOT_OBJECTSTORE_TOKEN} , or both.
66 Valid values for slot-description and token-label are available from output of
67 the command:
68 .Bd -literate -offset indent
69 # cryptoadm list -v
70 .Lp
71 The
72 .Ev ${METASLOT_ENABLED}
73 environment variable is used to specify whether
74 the user wants to turn the metaslot feature on or off.
75 Only two values are recognized.
76 The value "true" means meta slot will be on.
77 The value "false" means meta slot will be off.
78 .Lp
79 The
80 .Ev ${METASLOT_AUTO_KEY_MIGRATE}
81 environment variable is used to specify
82 whether the user wants sensitive token objects to move to other slots for
83 cryptographic operations.
84 Only two values are recognized.
85 The value "true" means meta slot will migrate sensitive token objects to other
86 slots if necessary.
87 The value "false" means meta slot will not migrate sensitive token objects to
88 other slots even if it is necessary.
89 .Lp
90 When the meta slot feature is enabled, the slot that provides token-based
91 object support is not shown as one of the available slots.
92 All of its functionality can be used with the meta slot.
93 .Lp
94 This library filters the list of mechanisms available from plug-ins based on
95 the policy set by
96 .Xr cryptoadm 1M .
97 .Lp
98 This library provides entry points for all PKCS#11 v2.40 functions.
99 See the PKCS#11 v2.40 specifications at
100 .Lk http://www.oasis-open.org .
101 .Lk http://www.oasis-open.org .
102 Plug-ins are added to
103 .Nm
104 by the
105 .Sy pkcs11conf
106 class action
107 script during execution of
108 .Xr pkgadd 1M .
109 The available mechanisms are administered by the
110 .Xr cryptoadm 1M
111 utility.
112 .Lp
113 Plug-ins must have all of their library dependencies specified, including
114 Plug-ins must have all of their library dependancies specified, including
115 Libraries that have unresolved symbols, including those from
116 .Xr libc 3LIB ,
117 will be rejected and a message will be sent to
118 .Xr syslog 3C
119 for such plug-ins.
120 .Lp
121 Due to U.S. Export regulations, all plug-ins are required to be
122 cryptographically signed using the
123 .Xr elfsign 1
```

```

124 utility.
125 .Lp
126 Any plug-in that is not signed or is not a compatible version of PKCS#11 will
127 be dropped by
128 .Nm .
129 When a plug-in is dropped, the administrator is alerted by the
130 .Xr syslog 3C
131 utility.
132 .Lp
133 The
134 .In security/pkcs11f.h
135 header contains function definitions.
136 The
137 .In security/pkcs11t.h
138 header contains type definitions.
139 Applications can include either of these headers in place of
140 .In security/pkcs11.h ,
141 which contains both function and type definitions.
142 .Sh INTERFACES
143 The shared object
144 .Pa libpkcs11.so.1
145 provides the public interfaces defined below.
146 See
147 .Xr Intro 3
148 for additional information on shared object interfaces.

232 .Sh STANDARDS
233 The PKCS#11 Standard functions conform to PKCS#11 Cryptographic Token
234 Interface Profiles v2.40 Extended Provider.
235 .Sh NOTES
236 If an application calls
237 .Fn C_WaitForSlotEvent
238 without the
239 .Dv CKF_DONT_BLOCK
240 flag set,
241 .Nm
242 must create threads internally.
243 If, however,
244 .Dv CKF_LIBRARY_CANT_CREATE_OS_THREADS
245 is set,
246 .Fn C_WaitForSlotEvent
247 returns
248 .Dv CKR_FUNCTION_FAILED .
249 .Lp
248 The PKCS#11 library does not work with Netscape 4.\fIX\fR but does work with
249 more recent versions of Netscape and Mozilla.
250 .Lp

```

250 Because
251 .Fn C_Initialize
252 .Fn C_Initialize
252 might have been called by both an application and a
253 library, it is not safe for a library or its plugins to call
254 .Fn C_Finalize .
255 A library can be finished calling functions from
256 .Nm ,
257 while an application might not.
