57 #
58 #
59 # RELEASE_BUILD should be cleared for final release builds.
60 # NOT_RELEASE_BUILD is exactly what the name implies.
61 #

```

```

62 # __GNUC toggles the building of ON components using gcc and related tools.
63 # Normally set to '#', set it to '' to do gcc build.
64 #
65 # The declaration POUND_SIGN is always '#'. This is needed to get around the
66 # make feature that '#' is always a comment delimiter, even when escaped or
67 # quoted. We use this macro expansion method to get POUND_SIGN rather than
68 # always breaking out a shell because the general case can cause a noticeable
69 # slowdown in build times when so many Makefiles include Makefile.master.
70 #
71 # While the majority of users are expected to override the setting below
72 # with an env file (via nightly or bldenv), if you aren't building that way
73 # (ie, you're using "ws" or some other bootstrapping method) then you need
74 # this definition in order to avoid the subshell invocation mentioned above.
75 #
76 #

91 #
92 # The variables below control the compilers used during the build.
93 # There are a number of permutations.
94 #
95 # __GNUC and __SUNC control (and indicate) the primary compiler. Whichever
96 # one is not POUND_SIGN is the primary, with the other as the shadow. They
97 # may also be used to control entirely compiler-specific Makefile assignments.
98 # __GNUC and GCC are the default.
99 #
100 # __GNUC64 indicates that the 64bit build should use the GNU C compiler.
101 # There is no Sun C analogue.
102 #
103 # The following version-specific options are operative regardless of which
104 # compiler is primary, and control the versions of the given compilers to be
105 # used. They also allow compiler-version specific Makefile fragments.
106 #
107 #
108 __SUNC=              $(POUND_SIGN)
109 $(__SUNC)__GNUC=     $(POUND_SIGN)
110 __GNUC64=            $(__GNUC)
111 #
112 # Allow build-time "configuration" to enable or disable some things.
113 # The default is POUND_SIGN, meaning "not enabled". If the environment
114 # passes in an override like ENABLE_SMB_PRINTING= (empty) that will
115 # uncomment things in the lower Makefiles to enable the feature.

36 # Note that the commands 'lp', and 'perl' are first in
37 # the list, violating alphabetical order. This is because they are very
38 # long-running and should be given the most wall-clock time for a
39 # parallel build.
40 #
41 # Commands in the FIRST_SUBDIRS list are built before starting the build
42 # of other commands. Currently this includes only 'isaexec' and
43 # 'latex'. This is necessary because $(ROOT)/usr/lib/isaexec or
44 # $(ROOT)/usr/lib/latex must exist when some other commands are built
45 # because their 'make install' creates a hard link to one of them.
46 #
47 # Commands are listed one per line so that TeamWare can auto-merge most
48 # changes.

60 # A number of dynamic executables have their own definitions of interfaces that
61 # exist in system libraries. To prevent name-space pollution it is desirable

```

```

62 # to demote the interfaces within these executable to locals. However, various
63 # symbols defined by the compiler drivers crt/values files need to remain
64 # global in any dynamic object that includes these files. These symbols
65 # interpose on symbols in libc, or provide call backs for other system
66 # libraries. The various compiler drivers (cc and gcc), and the crt/values
67 # files that these drivers are configured to include, differ between the
68 # various compilations environments (platform, 32/64-bit). Therefore, the
69 # only means of creating a mapfile to demote symbols is to dynamically generate
70 # the mapfile for a specific compilation environment.
71 #
72 # Here, template mapfiles are used to generate a number of compilation specific
73 # mapfiles. These mapfiles are referenced by components of the build through
74 # the MAPFILE.NGB macro defined in Makefile.master. These dynamically created
75 # mapfiles are not delivered into the $ROOT area, and therefore are not
76 # delivered as packaged components of the OSNet.
77 #

85 #
86 # This generic target creates two dynamic executables from an empty "main"
87 # program. These objects are not executed, but are analyzed to determine the
88 # global symbols each provides.
89 #
90 # The first executable demotes a family of known interfaces to local and allows
91 # all other symbol definitions to remain global. This executables provides the
92 # base for discovering all symbol definitions provided by the various
93 # compilation environments. The second executable demotes all symbols to
94 # locals. Within both executables, some symbols remain globals (_end, _etext,
95 # etc.) as the link-editor has special knowledge of these symbols and their
96 # expected visibility requirements. By inspecting the differences between the
97 # global symbols within the two executables, a mapfile can be generated to
98 # ensure the symbols defined by the compilation environments files remain
99 # global.

513 .KEEP_STATE:

515 #
516 # For the all and install targets, we clearly must respect library
517 # dependencies so that the libraries link correctly. However, for
518 # the remaining targets (check, clean, clobber, install_h, lint, _dc
519 # and _msg), libraries do not have any dependencies on one another
520 # and thus respecting dependencies just slows down the build.
521 # As such, for these rules, we use pattern replacement to explicitly
522 # avoid triggering the dependency information. Note that for clean,
523 # clobber and lint, we must use $(NOWAIT_SUBDIRS) rather than

```

1017 # NOTE: libc.so.1 must be linked with the minimal crt1.o and crtn.o
1018 # modules whose source is provided in the $(SRC)/lib/crt directory.
1019 # This must be done because otherwise the Sun C compiler would insert
1020 # its own versions of these modules and those versions contain code
1021 # to call out to C++ initialization functions. Such C++ initialization
1022 # functions can call back into libc before thread initialization is
1023 # complete and this leads to segmentation violations and other problems.
1024 # Since libc contains no C++ code, linking with the minimal crt1.o and
1025 # crtn.o modules is safe and avoids the problems described above.
