31 # uts/common/Makefile.rules
32 #
33 # This Makefile defines all the file build rules for the directory
34 # uts/common and its children. These are the source files which may
35 # be considered common to all SunOS systems.
36 #
37 # The following two-level ordering must be maintained in this file.
38 # Lines are sorted first in order of decreasing specificity based on
39 # the first directory component. That is, sun4u rules come before
40 # sparc rules come before common rules.
41 #
42 # Lines whose initial directory components are equal are sorted
43 # alphabetically by the remaining components.
44 #
45 #
46 # Section 1a: C objects build rules
47 #

30 # This makefile contains the common definitions for all intel
31 # implementation architecture independent modules.
32 #
34 #
35 # Machine type (implementation architecture):
36 #
37 PLATFORM = i86pc
39 #
40 # Everybody needs to know how to build modstubs.o and to locate unix.o.
41 # Note that unix.o must currently be selected from among the possible
42 # "implementation architectures". Note further, that unix.o is only
43 # used as an optional error check for undefines so (theoretically)
44 # any "implementation architectures" could be used. We choose i86pc
45 # because it is the reference port.
46 #

62 # Include the makefiles which define build rule templates, the
63 # collection of files per module, and a few specific flags. Note
64 # that order is significant, just as with an include path. The
65 # first build rule template which matches the files name will be
66 # used. By including these in order from most machine dependent
67 # to most machine independent, we allow a machine dependent file
68 # to be used in preference over a machine independent version
69 # (Such as a machine specific optimization, which preserves the
70 # interfaces.)

29 # This Makefile defines all file modules and build rules for the
30 # directory uts/intel and its children. These are the source files which
31 # are specific to the intel processor.
32 #
33 # The following two-level ordering must be maintained in this file.
34 # Lines are sorted first in order of decreasing specificity based on
35 # the first directory component. That is, sun4u rules come before
36 # sparc rules come before common rules.
37 #
38 # Lines whose initial directory components are equal are sorted
39 # alphabetically by the remaining components.
40 #
41 #
42 # Need a way to distinguish between the ia32 and amd64 subdirs.
