34 #
35 # It is easier to think in terms of directory names without the ROOT macro
36 # prefix. ROOTDIRS is TARGETDIRS with ROOT prefixes. It is necessary
37 # to work with ROOT prefixes when controlling conditional assignments.

26 #
27 # The link-editor related source files and Makefile files have at times been
28 # unified across all presently maintained release gates. However, some of the
29 # compiler pre-processor flags and link-editor flags are different among the
30 # releases. This file is used to specify such flags.
31 #
32 # This file is included by ./Makefile.com, but may also be included directly in
33 # the case where the utility is relying on the contents of .././Makefile.com.
34 #
35 # This file should be the only file which is different among the presently
36 # maintained release workspaces, when the sources are unified.
37 #
38 # CPPFEATUREMACROS provides for selectively turning on/off features within the
39 # various link-editor components. Presently, none are set.
40 #
41 # Some source files need to use #ifdef to distinguish between the patch release,
42 # and for the packages targeting to the pre-libc/libthread unified environment.
43 # These values are available for CPPFLAGS:
44 #
45 #     SGS_PRE_UNIFIED_PROCESS
46 #
47 #     is set if the target release is for pre-libc/libthread unified
48 #     environment. This is used for rtld and crle.
49 #
50 #
51 # Common Macro definitions
52 #
53 #

37 #
38 #
39 # By default, we define the source directory for libraries to be
40 # one level up from the ISA-specific directory, where the code is
41 # actually built. Many libraries define a 'common' directory to
42 # contain the source. These libraries must redefine SRCDIR as:
43 # SRCDIR = ../common
44 # Other variations are possible (../port, ../src, etc).
45 #
46 SRCDIR = ..
47 #
48 #
49 # We define MAPFILES here for the benefit of most libraries, those that
50 # follow the convention of having source files and other common files
51 # in the $(SRCDIR) directory. Libraries that do not follow this
52 # convention must define MAPFILES, or MAPFILEDIR for themselves.
53 # Libraries that do follow this convention but that need supplemental
54 # ISA-specific mapfiles can augment MAPFILES like this:
55 # MAPFILES += mapfile-vers
56 #
57 MAPFILEDIR = $(SRCDIR)
58 MAPFILES = $(MAPFILEDIR)/mapfile-vers
59 #
60 #
61 # If HDRDIR is left unset, then it's possible for the $(ROOTHDRDIR)/%
```

new/usr/src/lib/Makefile.lib

2

```
62 # install rule in lib/Makefile.targ to generate false matches if there
63 # are any common directory names between / and /usr/include ('xfn' is
64 # one common example). To prevent this, we set HDRDIR to a directory
65 # name that will almost surely not exist on the build machine.
66 #
67 HDRDIR= __nonexistent_directory__
