26 #
27 # Somewhat surprisingly, DTrace very much relies on the fact that when 32-bit
28 # is forced, pointers are not, in fact, narrowed to 32-bits. In particular, if
29 # this is not so (that is, if pointers are narrowed to their seemingly correct
30 # 32-bit width), helpers attached to 32-bit programs will fail to operate:
31 # they will erroneously zero the high 32-bits of the return values of 64-bit
32 # kernel pointers as returned by copyin(), alloca(), etc. This test asserts
33 # this implicit behavior -- and this comment regrettably serves as this
34 # behavior's only documentation.
35 #
